Title of Change: Cleanup DAAC Hardware Patch Map Baseline Documentation

The DAAC Hardware Patch Map baseline were established for Release 5A in CCRs 00-0239, 00-0249, and 00-0266. Corrections and refinements must be incorporated into these baseline documents to obtain a more accurate representation of the 5A patch baseline. Most patch updates are related to the SUN patch baseline at EDC, although there are some updates at the other DAACs.

The Hardware Patch Map Baseline corrections/updates are summarized below:

1. Remove redundant common SUN O/S patch bundles on affected EDC hosts, which occurred on some hosts that containing both core and site-specific bundles.

2. Remove redundant SGI Clearcase patch (i.e. -37)

3. Add missing SUN hardware dependent patches.

4. Delete Solaris 2.5.1 O/S patches from ACSLS workstations, since Solaris 2.6 patches are required on these workstations.

5. Replace Indigo/Indy Hardware patches on Disk Raid Driver host (x0aqg01) and replace with Challenge hardware dependent patch bundle.

6. Replace Transarc DCE for Solaris 2.5.1 patch CPL1 with Patch 49 (Ref. CCR 00-0348).
